PREFACE

This report presents statistics from the 1960 Census of Population on the social and economic characteristics of workers in professional and technical occupations. The characteristics shown include urban-rural residence, race, color, age, years of school completed, marital status, hours worked, weeks worked in 1959, income, year last worked, and occupation of spouse. Legal provision for this census, which was conducted as of April 1, 1960, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13 U.S. Code.

The major portion of the information compiled from the 1960 Census of Population appears in Volume I, Characteristics of the Population, which contains data for the United States, States and counties and their urban and rural parts, cities, minor civil divisions, etc. The present report is part of Volume II, Subject Reports, and is designated as PC(2)-7E. A list of the Volume II Subject Reports appears on the inside of the front cover. A summary description of all the final reports of the 1960 Population Census appears on page IV.

ACKNOWLEDGMENTS

A large number of persons participated in the various activities of the 1960 Census of Population. Primary responsibilities were exercised by many of the persons listed on the preceding page. Within the Population, Demographic Operations, Field, Geography, and Statistical Methods Divisions, most of the staff members worked on the program. Important contributions were also made by the staffs of the Administrative Service Division, Everett H. Burke, Chief; Budget and Finance Division, William E. Stiver, Chief; Data Processing Systems Division, Robert F. Drury, Chief; Jeffersonville Census Operations Office, Robert D. Krook, Chief; Personnel Division, James P. Taff, Chief; and Statistical Research Division, William N. Hurwitz, Chief.

Stanley Greene, Chief, William J. Milligan, and John A. Priebe of the Economic Statistics Branch, Population Division, had the major responsibility for planning this report and developing its content. John C. Beresford provided liaison with the operations staff, Elizabeth A. Larmon assisted in the preparation of the introductory text, and Mildred M. Russell and Leah S. Anderson performed the technical editorial work. The procedures for compiling the data were devised by Patience Lauriat, Catherine M. Neafsey, Alfonso E. Episcopo, and Thomas H. LaFerrara of the Demographic Operations Division. The sampling materials were prepared by Robert Hanson and Robert H. Finch, Jr. of the Statistical Methods Division.

The census program was designed in consultation with a number of advisory committees and many individuals in order to maximize the usefulness of the data. Among the groups organized for this purpose were the Technical Advisory Committee for the 1960 Population Census, the Council of Population and Housing Census Users, and the Federal Agency Population and Housing Census Council (sponsored by the U.S. Bureau of the Budget). The persons who served with these groups represented a wide range of interest in the census program; their affiliations included universities, private industry, research organizations, labor groups, Federal agencies, State and local governments, and professional associations.

May 1964.

FINAL REPORTS OF THE 1960 CENSUS OF POPULATION

The final reports of the 1960 Population Census are arranged in three volumes and a joint Population-Housing series of census tract reports. The 1960 Population Census publication program also includes preliminary, advance, and supplementary reports, certain evaluation, procedural, and administrative reports, and graphic summaries. After publication, copies of all reports are available for examination or purchase at any U.S. Department of Commerce Field Office.

Certain types of unpublished statistics are available for the cost of preparing a copy of the data. Also, under certain conditions, special tabulations of the 1960 Census data can be prepared on a reimbursable basis. In addition, there are available for purchase magnetic tapes and punchcards containing 1960 Census information on the characteristics of a one-in-a-thousand and a one-in-ten-thousand sample of the population of the United States. Confidentiality of the information, as required by law, has been maintained by the omission of certain identification items. Further information about any of these materials can be obtained by writing to the Chief, Population Division, Bureau of the Census, Washington, D.C., 20233.

Volume I. Characteristics of the Population. This volume consists of separate reports for the United States, each of the 50 States, the District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. For each of these 57 areas, the data were first issued in four separate paper-bound "chapters," designated as PC(1)-A, B, C, and D. (For Guam, Virgin Islands, American Samoa, and Canal Zone, the material normally contained in chapters B, C, and D are included in chapter B.) For library and general reference use, the paper-bound reports have been assembled and reissued in buckram-bound books identified as Parts A and 1 to 57 of Volume I.

Series PC(1)-1A to 57A: Chapter A. Number of Inhabitants. These reports contain final population counts for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, all incorporated places, unincorporated places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1B to 57B: Chapter B. General Population Characteristics. These reports present statistics on sex, age, marital status, color or race, and relationship to head of household for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1C to 53C: Chapter C. General Social and Economic Characteristics. These reports cover the subjects of nativity and parentage, State of birth, country of origin of the foreign stock, mother tongue, place of residence in 1955, year moved into present house, school enrollment by level and type, years of school completed, families and their composition, fertility, veteran status, employment status, weeks worked in 1959, year last worked, occupation group, industry group, class of worker, place of work, means of transportation to work, and income of persons and families. Each subject is shown for some or all of the following areas: States and counties and their urban, rural-nonfarm, and rural-farm parts, standard metropolitan statistical areas, urbanized areas, and urban places.

Series PC(1)-1D to 53D: Chapter D. Detailed Characteristics. These reports present most of the subjects covered in chapter C, above, cross-classified by age, color, and other characteristics. There is also included additional information on families, as well as data on single years of age, detailed occupation, and detailed industry. Each subject is shown for some or all of the following areas: States and their urban, rural-nonfarm, and rural-farm parts; and large counties, cities, and standard metropolitan statistical areas.

Volume I, Part A: Number of Inhabitants. This is a compendium of the 57 chapter A reports, i.e., PC(1)-1A to 57A.

Volume I, Parts 1 to 57: Characteristics of the Population. The 57 parts relate respectively to the United States, each of the 50 States, District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. Each part contains the data previously published in the four chapters A, B, C, and D, and is in the form of a separate, buckram-bound book. Parts 54, 55, 56, and 57--for Guam, Virgin Islands, American Samoa, and Canal Zone, respectively--are bound in a single book.

Volume II (Series PC(2) reports). Subject Reports. Each report in this volume concentrates on a particular subject. Detailed information and cross-relationships are generally provided on a national and regional level; in a few reports data for States or standard metropolitan statistical areas are also shown. Among the characteristics covered are ethnic origin and race, fertility, families, migration, education, employment, unemployment, occupation, industry, and income. There is also a report on the geographic distribution and characteristics of inmates of institutions. A list of reports is given on the inside of the front cover.

Volume III (Series PC(3) reports). Selected Area Reports. Three of the reports in this volume present selected characteristics of the population (1) for State economic areas, (2) for standard metropolitan statistical areas, and (3) according to the size of place where the individual resided. A fourth report provides data on the social and economic characteristics of Americans overseas.

Series PHC(1). Census Tract Reports. These reports present information on both population and housing subjects. There is one report for each of 180 tracted areas in the United States and Puerto Rico. The population subjects include age, race, marital status, country of origin of the foreign stock, relationship to head of household, school enrollment, years of school completed, place of residence in 1955, employment status, occupation group, industry group, place of work, means of transportation to work, and income of families, as well as certain characteristics of the nonwhite population in selected tracts. The housing subjects include tenure, color of head of household, vacancy status, condition and plumbing facilities, number of rooms, number of bathrooms, number of housing units in structure, year structure built, basement, heating equipment, number of persons in unit, persons per room, year household head moved into unit, automobiles available, value of property, and gross and contract rent, as well as certain characteristics of housing units with nonwhite household head for selected tracts. In addition, for selected tracts these reports contain data on certain population and housing subjects for persons of Puerto Rican birth or parentage and for white persons with Spanish surname. (This series is the same as the tract reports listed in the publication program for the 1960 Census of Housing.)

TABLES

Table	Page
1.--Residence of professional workers in the experienced civilian labor force, by occupation and sex, for the United States, by regions: 1960	1
2.--Race of professional workers in the experienced civilian labor force, by occupation and sex, for the United States: 1960	9
3.--Marital status of professional workers in the experienced civilian labor force, by occupation, age, and sex, for the United States: 1960	11
4.--Hours worked by employed professional workers, by occupation, age, and sex, for the United States: 1960	21
5.--Weeks worked in 1959 by professional workers in the experienced civilian labor force, by occupation, age, and sex, for the United States: 1960	33
6.--Year last worked by professional workers in the labor reserve, by occupation, age, and sex, for the United States: 1960	43
7.--Income in 1959 of professional workers in the experienced civilian labor force, by occupation, years of school completed, age, and sex, for the United States: 1960	51
8.--Income in 1959 of nonwhite professional workers in the experienced civilian labor force, by occupation, age, and sex, for the United States: 1960	109
9.--Income in 1959 of nonwhite professional workers in the experienced civilian labor force, by years of school completed, occupation, and sex, for the United States: 1960	118
10.--Earnings in 1959 of professional workers in the experienced civilian labor force, by occupation, age, and sex, for the United States: 1960	126
11.--Wage or salary income in 1959 of wage and salary professional workers in the experienced civilian labor force, by occupation, age, and sex, for the United States: 1960	135
12.--Occupation of spouse of persons in the experienced civilian labor force with professional occupations, for the United States: 1960	144

REGIONS AND GEOGRAPHIC DIVISIONS OF THE UNITED STATES

Characteristics of Professional Workers

GENERAL

This report presents detailed national statistics on selected economic and social characteristics of men and women workers in the professional and technical occupations. A limited amount of data by regions is shown in table 1. The statistics in this report are based on a 5-percent sample of the population enumerated in the Eighteenth Decennial Census of Population, taken as of April 1, 1960. The demographic and social characteristics shown for professional workers include urban-rural residence, sex, age, race, years of school completed, and marital status. Also presented are data on such economic factors as hours worked, weeks worked in 1959, year last worked, and income in 1959. This report provides a broad basis for analyzing many of the factors affecting the composition of the Nation's professional and technical working force.

RELATED MATERIALS

1960 Census reports.--The present report supplements the reports for individual States and for the United States and its several regions and divisions, originally published in 1960 Census of Population, Series PC(1)-C reports, "General Social and Economic Characteristics," and the Series PC(1)-D reports, "Detailed Characteristics." These reports form two of the four chapters of 1960 Census of Population, Volume I, Characteristics of the Population. Part I of Volume I presents data originally published in the four separate United States Summary reports; the remainder of the volume is divided into a part for each State and for the outlying areas, containing data originally published in the separate paper-bound series. In Volume I, data on professional and technical workers are presented for the population as a whole, each State, standard metropolitan statistical area, urban place, and county. Cross-classifications of these data by age, year last worked, industry, place of work, and earnings in 1959 are also presented for the United States in Volume I. The tables in the present report provide greater detail for analytical use at the national level.

Several of the Volume II reports--designated as Series PC(2)--contain data on professional and technical occupations by various characteristics. Most extensive of these is the report PC(2)-7A, Occupational Characteristics, which covers such subjects as urban-rural residence, sex, age, race, mobility, years of school completed, size of family, hours worked, class of worker, weeks worked in 1959, and income received in 1959 for persons in each of approximately 500 detailed occupational categories. The report PC(2)-7C, Occupation by Industry, presents detailed national statistics cross-classifying occupation by industry for employed men and women. Selected social and economic characteristics of persons in the teaching professions are presented in report PC(2)-7D, Characteristics of Teachers. The report PC(2)-7B, Occupation by Earnings and Education, presents national and regional statistics on educational attainment and earnings in 1959 for males between the ages of 18 and 64 years in selected occupations.

Other related PC(2) reports present occupational data in relation to the subject of the report. Subjects covered in these reports are nonwhite population by race, Puerto Ricans, persons of Spanish surname, mobility, school enrollment, educational attainment, family characteristics, fertility, and journey to work.

The PC(3)-1A report, State Economic Areas, includes data on major occupation groups for State economic areas by urban and rural residence. The report PC(3)-1D, Standard Metropolitan Statistical Areas, presents data on selected broad occupational groups, including professional workers, in the largest standard metropolitan statistical areas and in various types of groupings of SMSA's.

1950 Census reports.--The report entitled 1950 Census of Population, Volume IV, Special Reports, Part 1, chapter B, Occupational Characteristics, contains information similar to that shown in this report. (For a discussion of 1950-1960 comparisons, see section below on "Comparability.")

Current Population Survey.--Data on occupations are also collected by the Bureau of the Census in the Current Population Survey (CPS) and published monthly by the Bureau of Labor Statistics, U.S. Department of Labor, in Employment and Earnings. In April 1960, the data for this survey were collected from a sample of approximately 35,000 households in 333 areas throughout the country. In addition, CPS data on major occupation groups in cross-classification with such characteristics as mobility, marital status, and income are published by the Census Bureau in Series P-20 and P-60 Current Population Reports. The statistics provided by the Current Population Survey are, in general, designed to be comparable with the decennial census statistics. There are, however, certain elements of difference, as explained in the section on "Comparability."

Other reports.--Several Federal agencies produce either periodic or single-time reports on various professional occupations. These agencies include the National Science Foundation; Public Health Service

and Office of Education, U.S. Department of Health, Education, and Welfare; and various agencies of the U.S. Department of Labor.

AVAILABILITY OF UNPUBLISHED DATA

Data shown in this report can also be obtained for regions of the United States on a reimbursable basis. Requests for unpublished data, giving a specific description of the figures desired, may be made by writing to the Chief, Population Division, Bureau of the Census, Washington, D.C., 20233. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible because tape files are not maintained indefinitely.

DEFINITIONS AND EXPLANATIONS

Some of the definitions used in 1960 differ from those used in 1950. These changes were made after consultation with users of census data in order to improve the statistics, even though it was recognized that comparability would be affected. The definitions and explanations should be interpreted in the context of the 1960 Censuses, in which data were collected by a combination of self-enumeration, direct interview, and observation by the enumerator.

The definitions below are consistent with the instructions given to the enumerator. As in all surveys, there were some failures to execute the instructions exactly. Through the forms distributed to households, the respondents were given explanations of some of the questions more uniformly than would have been given in direct interviews. Nevertheless, it was not feasible to give the full instructions to the respondents, and some erroneous replies have undoubtedly gone undetected.

More complete discussions of the definitions of population items are given in 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary, and in each of the State parts.

EMPLOYMENT STATUS

The data on employment status relate to the calendar week prior to the date on which the respondents filled their Household Questionnaires or were interviewed by enumerators. This week is not the same for all respondents because not all persons were enumerated during the same week.

Employed persons comprise all civilians 14 years old and over who were either (a) "at work"--those who did any work for pay or profit, or worked without pay for 15 hours or more on a family farm or in a family business; or (b) were "with a job but not at work"--those who did not work and were not looking for work but had a job or business from which they were temporarily absent because of bad weather, industrial dispute, vacation, illness, or other personal reasons.

Persons are classified as unemployed if they were 14 years old and over and not "at work" but looking for work. A person is considered as looking for work not only if he actually tried to find work but also if he had made such efforts recently (i.e., within the past 60 days) and was awaiting the results of these efforts. Persons waiting to be called back to a job from which they had been laid off or furloughed are also counted as unemployed. Unemployed persons who have worked at any time in the past are classified as the "experienced unemployed."

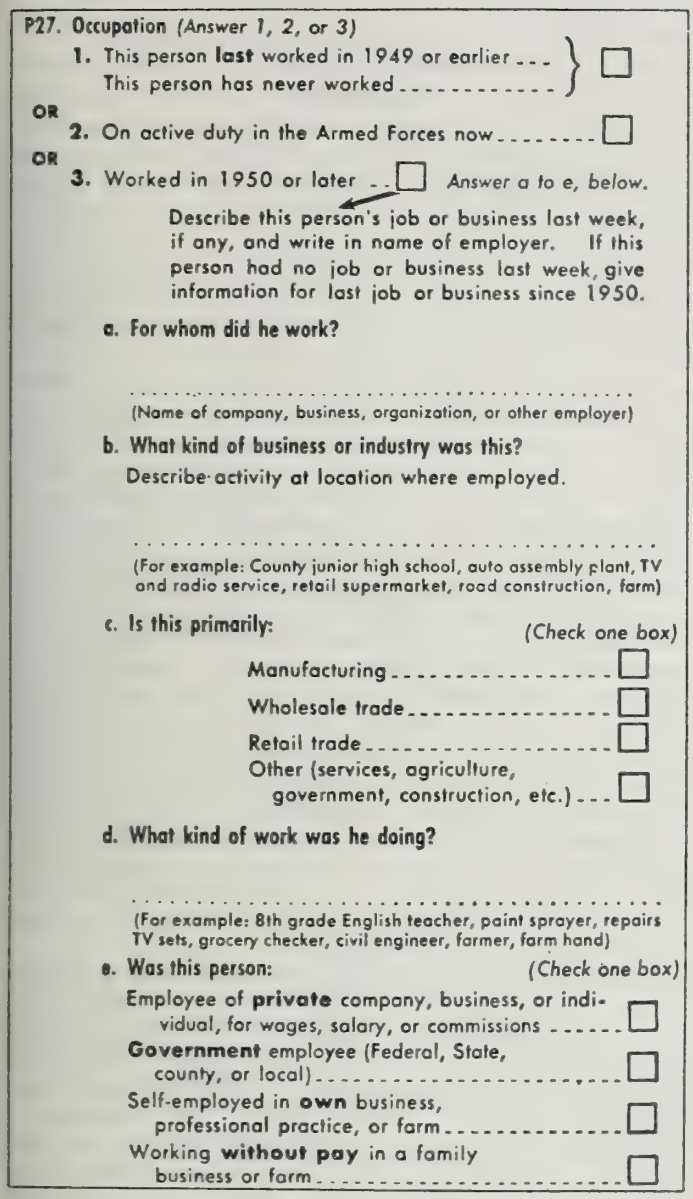
The "civilian labor force" includes all persons classified as employed or unemployed, as described above. The "labor force" also includes members of the Armed Forces (persons on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard). The "experienced civilian labor force" comprises the employed and the experienced unemployed.

Persons "not in the labor force" comprise all those 14 years old and over who are not classified as members of the labor force, including persons doing only incidental unpaid family work (less than 15 hours during the week).

HOURS WORKED

The statistics on hours worked pertain to the number of hours actually worked, and not necessarily to the number usually worked or the scheduled number of hours. For persons working at more than one job, the figures reflect the combined number of hours worked at all jobs during the week. The data on hours worked presented in this report provide a broad classification of persons at work into full-time and part-time workers. Persons are considered to be working full time if they worked 35 hours or more during the reference week and part time if they worked less than 35 hours.

OCCUPATION AND CLASS OF WORKER



Occupation

The data on occupation, as well as industry and class of worker, were derived from answers to the questions on the Household Questionnaire, shown on the following page.

In the 1960 Census of Population, information on occupation was collected for persons in the experienced civilian labor force as well as for persons not in the current labor force but who had worked some time during the period 1950 to April 1960. For an employed person, the information referred to the job he held during the reference period. If he was employed at two or more jobs, the job at which he worked the greatest number of hours during the reference period was reported. For experienced unemployed persons, i.e., unemployed persons who have had job experience, and for those not in the labor force, the occupational information referred to the last job that had been held.

The occupational classification system used in the 1960 Census of Population was developed in consul-

tation with many individuals, private organizations, and government agencies, and in particular the Interagency Occupational Classification Committee of the U.S. Bureau of the Budget.

P27. Occupation *(Answer 1, 2, or 3)*

1. This person **last** worked in 1949 or earlier ... / This person has never worked ... ☐

OR

2. On active duty in the Armed Forces now ... ☐

OR

3. Worked in 1950 or later ... ☐ *Answer a to e, below.*

Describe this person's job or business last week, if any, and write in name of employer. If this person had no job or business last week, give information for last job or business since 1950.

a. For whom did he work?

.....
(Name of company, business, organization, or other employer)

b. What kind of business or industry was this?
Describe activity at location where employed.

.....
(For example: County junior high school, auto assembly plant, TV and radio service, retail supermarket, road construction, farm)

c. Is this primarily: *(Check one box)*

Manufacturing ... ☐
Wholesale trade ... ☐
Retail trade ... ☐
Other (services, agriculture, government, construction, etc.) ... ☐

d. What kind of work was he doing?

.....
(For example: 8th grade English teacher, paint sprayer, repairs TV sets, grocery checker, civil engineer, farmer, farm hand)

e. Was this person: *(Check one box)*

Employee of **private** company, business, or individual, for wages, salary, or commissions ... ☐
Government employee (Federal, State, county, or local) ... ☐
Self-employed in **own** business, professional practice, or farm ... ☐
Working **without pay** in a family business or farm ... ☐

The occupational classification system developed for the 1960 Census of Population is organized into 12 major groups and consists of 297 specific occupation categories. The composition of the 297 specific categories is shown in the publication, U.S. Bureau of the Census, 1960 Census of Population, Classified Index of Occupations and Industries, U.S. Government Printing Office, Washington, D.C., 1960.

Professional and technical workers.--The occupations shown in this report are the 70 specific occupation categories found under the major group "professional, technical, and kindred workers." Six of the categories show class-of-worker subgroups. Three of these show salaried and self-employed; the other three show public and private.

The abbreviation "n.e.c." used in occupation tables of the census means "not elsewhere classified."

Class of Worker

The class-of-worker categories shown for several of the occupations in this report are combinations of the four categories defined below:

1. Private wage and salary workers.--Persons who worked for a private employer for wages, salary, commission, tips, pay-in-kind, or at piece rates.

2. Government workers.--Persons who worked for any governmental unit (Federal, State, local, or international) regardless of the activity which the particular agency carried on.

3. Self-employed workers.--Persons who worked for profit or fees in their own business, profession, or trade, or who operated a farm either as an owner or tenant.

4. Unpaid family workers.--Persons who worked without pay on a farm or in a business operated by a person to whom they are related by blood or marriage. The major portion of unpaid family workers in the professions consists of women assisting their husbands. An example of this is a registered nurse working in the office of her husband who is a physician. The small number of unpaid family workers is included in the self-employed in the detailed tables.

"Wage and salary workers" include private wage and salary workers and government workers, as defined above.

Table A shows the class of worker of employed professional workers.

Table A.--CLASS OF WORKER OF EMPLOYED PROFESSIONAL, TECHNICAL, AND KINDRED WORKERS, BY SEX, FOR THE UNITED STATES: 1960

(Based on 5-percent sample)

Class of worker	Male	Female
Total employed	4,473,300	2,749,941
Private wage and salary workers	2,579,836	1,146,443
Government workers	1,206,707	1,418,588
Self-employed workers	682,900	171,584
Unpaid family workers	3,857	13,326

Comparability

Earlier censuses.--Changes in schedule design and interviewing techniques between 1950 and 1960 may have affected comparability for some of the occupation categories. For example, a person may report his own job activities differently on self-enumeration when he is given the opportunity to report for himself, as contrasted to the 1950 direct enumeration procedure where job descriptions were normally obtained in an interview with a member of the worker's family (usually his wife).

The occupational classification system used in 1960 is basically the same as that of 1940 and 1950. There are a number of differences, however, in title and content for certain items, as well as in the degree of detail shown. Most of the differences involved

expansions of the 1950 categories. In this report "college presidents, professors, and instructors (n.e.c.)" are subdivided into "college presidents and deans," and "professors and instructors (n.e.c.)." "Sales engineers" have been distinguished from "engineers (n.e.c.)." "Natural scientists" are divided into six categories as opposed to the previous one. The social scientists category was expanded from one to four groups. "Elementary teachers" and "secondary teachers" were separated from "teachers (n.e.c.)" and are each shown separately; similar treatment was afforded "public relations men and publicity writers," formerly part of "editors and reporters."

The three technician groups--"technicians, electrical and electronic," "other engineering and physical sciences," and "technicians (n.e.c.)" were classified in two groups--"technicians, testing" and "technicians (n.e.c.)" in 1950.

The following publications contain information on the various factors of comparability and are particularly useful for understanding differences in the occupation from earlier censuses: U.S. Bureau of the Census, Sixteenth Census Reports, Population, Comparative Occupation Statistics for the United States, 1870 to 1940, 1943, and Bureau of the Census Working Paper No. 5, Occupational Trends in the United States: 1900 to 1950, 1958.

Current Population Survey.--The Current Population Survey (CPS) published each month the number of professional workers in three broad classifications. Table B compares figures from the 1960 Census 25-percent sample and the April 1960 CPS showing the percent of the employed who were professional workers.

Table B.--PROFESSIONAL WORKERS AS PERCENT OF THE TOTAL EMPLOYED FOR THE 1960 CENSUS AND APRIL 1960 CURRENT POPULATION SURVEY, BY SEX

Occupation and sex	Census (25-percent sample)[1]	CPS
Total:		
Professional, technical, & kindred wkrs.	11.8	11.4
Medical and other health workers.....	2.1	2.0
Teachers, except college.....	2.7	2.6
Other profess'l, tech., & kind. wkrs..	6.9	6.8
Male:		
Professional, technical, & kindred wkrs.	10.8	10.6
Medical and other health workers.....	1.3	1.2
Teachers, except college.....	1.1	1.0
Other profess'l, tech., & kind. wkrs..	8.4	8.4
Female:		
Professional, technical, & kindred wkrs.	13.8	13.0
Medical and other health workers.....	3.9	3.5
Teachers, except college.....	6.0	5.9
Other profess'l, tech., & kind. wkrs..	3.9	3.6

[1] Excludes persons who did not report their occupation.

The differences that exist between the national data from the population census and the CPS are due to a number of factors. Among these are the more extensive training, control, and experience of the CPS enumerators; differences in the time period to which the labor force data apply (the CPS covered the week containing the 12th of the month whereas the census covered the week prior to the date the respondent filled his questionnaire, or was interviewed); differences in question wording and format of the schedules; differences in the methods used to process the original data into statistical tables; differences in the weighting procedure and in the population controls; differences in noninterview rates and the treatment of noninterview cases, and the sampling variability in the CPS and in the 5-percent sample used in this report.

Other data.--Comparability between statistics presented in this report and statistics from other sources is frequently affected by differences in concepts and definitions. Because the 1960 Census employment data were obtained from households, they differ from statistics based on reports from professional associations, certain government programs, and professional unions. In the statistics shown here, persons employed at more than one job are counted only once as employed and are classified according to the job at which they worked the greatest number of hours during the reference period. In statistics based on reports from business establishments, on the other hand, persons who work for more than one establishment may be counted more than once. Two additional differences in establishment data from census data are the exclusion of many self-employed persons, and the possible exclusion of persons with a job but not at work. Comparability between statistics presented in this report and those from other sources is also affected, in some instances, by the use of different classification systems. For example, some other sources classify professors and instructors not as teachers but rather in the occupation indicated by their field of instruction. Statistics based on organizational membership may differ because of the inclusion of retired persons or persons devoting all or most of their time to other activities, the inclusion of the same person in two or more different listings, and the fact that relatively few organizations attain complete coverage of membership in an occupation field.

The number of professional and technical workers shown in this report is probably subject to some error in both employment and occupational classification. These errors arise from the difficulty of applying certain of the employment status concepts, and, perhaps more important, from the fact that complete information is not always obtained. There are also cases of persons describing their job activities in such terms as to lead to an upgrading of occupational classification into professional ranks.

Another possible source of error in the data is in the occupational classification. In the process of assigning the many thousands of job titles reported in the census to one of the occupation groups found in the classification scheme used in the census, errors may be expected to have occurred.

More information on quality of the data will be available after various census evaluation projects are completed.

URBAN-RURAL RESIDENCE

In general, the urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas.

More specifically, according to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas; (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

FARM-NONFARM RESIDENCE

The rural population is subdivided into the rural-farm population, which comprises all rural residents living on farms, and the rural-nonfarm population, which comprises the remaining rural population. In the 1960 Census, the farm population consists of persons living in rural territory on places of 10 or more acres from which sales of farm products amounted to $50 or more in 1959 or on places of less than 10 acres from which sales of farm products amounted to $250 or more in 1959. All persons living in group quarters are classified as nonfarm except the relatively few living in workers' quarters (including quarters for migratory agricultural workers) that are located on a farm or ranch.

URBANIZED AREA

An urbanized area contains at least one city of 50,000 inhabitants or more in 1960 and the surrounding closely settled incorporated places and unincorporated areas that meet certain criteria relating to population density or land use. An urbanized area may be thought of as divided into the central city, or cities, and the remainder of the area, or the urban fringe. All persons residing in an urbanized area are included in the urban population.

AGE

The age classification is based on the age of the person in completed years as of April 1, 1960, as determined from the reply to a question on month and year of birth.

RACE AND COLOR

The term "color" refers to the division of population into two groups, white and nonwhite. The color group designated as "nonwhite" consists of such races as the Negro, American Indian, Japanese, Chinese, Filipino, Korean, Hawaiian, Asian Indian, Eskimo, Aleut, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Negro.--In addition to persons of Negro and of mixed Negro and white descent, this classification includes persons of mixed Indian and Negro descent, unless the Indian ancestry predominates or unless the individual is regarded as an Indian in the community.

American Indian.--In addition to fullblooded Indians, persons of mixed white and Indian blood are included if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community. Indians living in Indian territory or on reservations were not included in the population until 1890.

Other races.--Separate statistics are given in this report for Japanese and Chinese. The category "other races" includes Filipinos, Koreans, Hawaiians, Asian Indians, Eskimos, Aleuts, Malayans, etc.

Mixed parentage.--Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the special exceptions noted above.

YEARS OF SCHOOL COMPLETED

The data on years of school completed were derived from the answers to the two questions: (a) "What is the highest grade (or year) of regular school he has ever attended?" and (b) "Did he finish this grade (or year)?" Enumerators were instructed to obtain the approximate equivalent grade in the American school system for persons whose highest grade of attendance was in a foreign school system, whose highest level of attendance was in an ungraded school, whose highest level of schooling was measured by "readers," or whose training by a tutor was regarded as qualifying under the "regular" school definition. Persons were to answer "No" to the second question if they were attending school, had completed only part of a grade before they dropped out, or failed to pass the last grade attended.

The number in each category of highest grade of school completed represents the combination of (a) persons who reported that they had attended the indicated grade and finished it, and (b) those who had attended the next higher grade but had not finished it.

The questions on educational attainment applied only to progress in "regular" schools. Regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional degree. Schooling that was not obtained in a regular school and schooling from a tutor or through correspondence courses were counted only if the credits obtained were regarded as transferable to a school in the regular school system. Schooling which is generally regarded as not regular includes that which is given in nursery schools, in specialized vocational, trade, or business schools; in on-the-job training; and through correspondence courses.

Elementary school, as defined here, includes grades 1 to 8, and high school includes grades 9 to 12. College includes junior or community colleges, regular 4-year colleges, and graduate or professional schools.

MARITAL STATUS

This classification refers to the marital status of the person at the time of enumeration. Persons classified as "married" comprise, therefore, both those who have been married only once and those who remarried after having been widowed or divorced. Persons reported as separated (either legally separated or otherwise absent from the spouse because of marital discord) are classified as a subcategory of married persons. The enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Persons "ever married" are those in the categories married (including separated), widowed, and divorced.

A married person with "spouse present" is a man or woman whose spouse was enumerated as a member of the same household even though he or she may have been temporarily absent on business or vacation, visiting, in a hospital, etc., at the time of enumeration. Persons classified as "married, spouse absent" include both those who are separated because of marital discord and those whose spouse is absent for other reasons, such as service in the Armed Forces or employment at a considerable distance from home. In table 12, the number of professional men whose wives were also in professional occupations differs from the number of professional women whose husbands were in professional occupations because of the methods used to inflate the sample data.

WEEKS WORKED IN 1959

The data on weeks worked in 1959 pertain to the number of different weeks during 1959 in which a person did any work for pay or profit (including paid vacation and sick leave) or worked without pay on a family farm or in a family business. Weeks of active service in the Armed Forces are also included.

YEAR LAST WORKED

The "year last worked" pertains to the most recent year in which a person did any work for pay or profit, or worked without pay on a family farm or in a family business. Active service in the Armed Forces is also included. Data derived from this item were tabulated for persons classified as not in the labor force and for persons classified as unemployed. Persons not in the labor force with work experience within the last 10 years are referred to as members of the "labor reserve."

INCOME IN 1959

Information on income for the calendar year 1959 was requested from all persons 14 years old and over in the sample. "Total income" is the sum of amounts reported separately for wage or salary income, self-employment income, and other income. Wage or salary income is defined as the total money earnings received for work performed as an employee. It represents the amount received before deductions for personal income taxes, Social Security, bond purchases, union dues, etc. Self-employment income is defined as net money income (gross receipts minus operating expenses) from a business, farm, or professional enterprise in which the person was engaged on his own account. Earnings are obtained by summing wage and salary income and self-employment income. Other income includes money income received from such sources as net rents, interest, dividends, Social Security benefits, pensions, veterans' payments, unemployment insurance, and public assistance or other governmental payments, and periodic receipts from insurance policies or annuities. Not included as income are money received from the sale of property (unless the recipient was engaged in the business of selling such property), the value of income "in kind," withdrawals of bank deposits, money borrowed, tax refunds, and gifts and lump-sum inheritances or insurance payments.

COLLECTION AND PROCESSING OF DATA

COLLECTION OF DATA

Several enumeration forms were used to collect the information for the 1960 Census of Population. A few days before the census date, the Post Office Department delivered an Advance Census Report (ACR) to households on postal delivery routes. This form contained questions which were to be answered for every person and every housing unit. Household members were requested to fill the ACR and have it ready for the enumerator. The census enumerator recorded this information on a form specially designed for electronic data processing by FOSDIC (Film Optical Sensing Device for Input to Computer). The information was either transcribed from the ACR to the complete-count FOSDIC schedule or entered on this schedule during direct interview.

In the densely populated areas, the enumerator left a Household Questionnaire to be completed by each household (or person) in the sample and mailed to the local census office. The population and housing information was transcribed from the Household Questionnaire to a sample FOSDIC schedule. When the Household Questionnaire was not returned or was returned without having been completed, the enumerator collected the missing information by personal visit or by telephone and entered it directly on the sample FOSDIC schedule. In the remaining areas, when the enumerator

picked up the ACR, he obtained all the information by direct interview and recorded it directly on the sample FOSDIC schedule.

Soon after the enumerator started work, his schedules were examined in a formal field review. This operation was designed to assure at an early stage of the work that the enumerator was performing his duties properly and had corrected any errors he had made.

More detailed descriptions of the 1960 Census procedures in the collection and processing of the data are given in reports entitled United States Censuses of Population and Housing, 1960: Principal Data Collection Forms and Procedures, 1961; and Processing the Data, 1962, U.S. Government Printing Office, Washington, D.C., 20402.

MANUAL EDITING AND CODING

After the FOSDIC forms had been checked for completeness in the field, they were sent to a central processing office for manual editing and coding and for microfilming. Except where some special problems arose, there was no manual coding of the FOSDIC forms for complete-count data. On the sample forms, the manual operation was limited to those items where coding required the reading of written entries and therefore could not be done effectively by machine. The coding clerks converted the written entries to codes by marking the appropriate circles on the FOSDIC schedules and at the same time were able to correct obviously wrong entries and sometimes supply missing information.

ELECTRONIC PROCESSING

After the enumerators and coders recorded the information by marking the appropriate circles, the schedules were microfilmed. The information on the microfilm was then read by FOSDIC, which converted the markings to signals on magnetic tape. The tape, in turn, was processed in an electronic computer, which was used extensively to edit and tabulate the data and to produce the publication tables.

EDITING

For a majority of items, nonresponses and inconsistencies were eliminated by using the computer to assign entries and correct inconsistencies. In general, few assignments or corrections were required, although the amount varied by subject and by enumerator.

The assignment of an acceptable entry by machine was based on related information reported for the person or on information reported for a similar person in the immediate neighborhood. For example, in the assignment of age in the complete-count tabulations, the computer stored reported ages of persons by sex, color or race, household relationship, and marital status; each stored age was retained in the computer only until a succeeding person having the same characteristics and having age reported was processed through the computer; this stored age was assigned to the next person whose age was unknown and who otherwise had the same characteristics. This procedure insured that the distribution of ages assigned by the computer for persons of a given set of characteristics would correspond closely to the reported age distribution of such persons as obtained in the current census.

The extent of the allocations for nonresponse or for inconsistency is shown for the United States and for States, places of 10,000 inhabitants or more, and other areas in appendix tables in chapters B, C, and D of 1960 Census of Population, Volume I, Characteristics of the Population.

Specific tolerances were established for the number of computer allocations acceptable for a given area. If the number was beyond tolerance, the data were rejected and the original schedules were reexamined to determine the source of the error. Correction and reprocessing were undertaken as necessary and feasible.

ACCURACY OF THE DATA

Human and mechanical errors occur in any mass statistical operation such as a decennial census. Such errors include failure to obtain required information from respondents, obtaining inconsistent information, recording information in the wrong place or incorrectly, or otherwise producing inconsistencies between entries on interrelated items on the field documents. Sampling biases occur because some of the enumerators fail to follow the sampling instructions. Clerical coding and editing errors occur, as well as errors in the electronic processing operation.

Careful efforts are made in every census to keep the errors in each step at an acceptably low level. Review of the enumerator's work, verification of manual coding and editing, checking of tabulated figures, and ratio estimation of sample data to control totals from the complete count reduce the effects of the errors in the census data.

Very minor differences between tables in this report or between corresponding data in this report and other reports containing 1960 Census data from the 5-percent sample result from imperfections in the electronic equipment. No attempt has been made to reconcile these minor discrepancies.

Some innovations in the 1960 Censuses reduced errors in processing and others produced a more consistent quality of editing. The elimination of the card-punching operation removed one important source of error. The extensive use of electronic equipment insured a more uniform and more flexible edit than could have been accomplished manually or by less intricate mechanical equipment. It is believed that the use of electronic equipment in the 1960 Censuses has improved the quality of the editing compared with that of earlier censuses but, at the same time, it has introduced an element of difference in the statistics.

A group of reports designated Evaluation and Research Program Series will deal with the methods, results, and interpretation of a group of evaluation and research studies of the 1960 Censuses of Population and Housing. A report entitled The Post-Enumeration Survey: 1950, Technical Paper No. 4, presents evaluative material on the 1950 Census.

SAMPLE DESIGN AND SAMPLING VARIABILITY

SAMPLE DESIGN

For persons in housing units at the time of the 1960 Census, the sampling unit was the housing unit and all its occupants; for persons in group quarters, it was the person. On the first visit to an address, the enumerator assigned a sample key letter (A, B, C, or D) to each housing unit sequentially in the order in which he first visited the units, whether or not he completed an interview. Each enumerator was given a random key letter to start his assignment, and the order of canvassing was indicated in advance, although these instructions allowed some latitude in the order of visiting addresses. Each housing unit which was assigned the key letter "A" was designated as a sample unit, and all persons enumerated in the unit were included in the sample. In every group quarters, the sample consisted of every fourth person in the order listed. The 1960 statistics in this report are based on a subsample of one-fifth of the original 25-percent sample schedules. The subsample was selected on the computer, using a stratified systematic sample design. The strata were made up as follows: for persons in regular housing units there were 36 strata, i.e., 9 household size groups by 2 tenure groups by 2 color groups; for persons in group quarters, there were 2 strata, i.e., the 2 color groups.

Although the sampling procedure did not automatically insure an exact 5-percent sample of persons, the sample design was unbiased if carried through according to instructions. Generally, for large areas, the deviation from the estimated sample size was found to be quite small. Biases may have arisen, however, when the enumerator failed to follow his listing and sampling instructions exactly.

Table C compares the number of professional workers, as presented in this report, with the corresponding figures based on the 25-percent sample presented in Volume I of the 1960 Census of Population. Differences in this table reflect primarily sampling errors.

Table C.--COMPARISON OF 25-PERCENT AND 5-PERCENT SAMPLE DATA ON PROFESSIONAL WORKERS, BY SEX, FOR THE UNITED STATES: 1960

Occupation and sex	25-percent sample	5-percent sample	Percent distribution		Ratio of 25-percent sample number to 5-percent sample number
			25-percent sample	5-percent sample	
MALE					
Total, experienced civilian labor force	45,686,325	45,713,381	100.00	100.00	0.999
Professional, technical, and kindred workers	4,542,702	4,536,067	9.94	9.92	1.001
Accountants and auditors	396,343	396,106	0.87	0.87	1.001

Other professional, technical, and kindred workers	580,168	578,097	2.60	2.59	1.004

RATIO ESTIMATION

The statistics based on the 5-percent sample of the 1960 Census returns are estimates that have been developed through the use of a ratio estimation procedure. This procedure was carried out for each of the following 44 groups of persons in each of the sample weighting areas:[1]

Group	Sex, color, and age	Relationship and tenure
	Male white:	
1	Under 5	
2	5 to 13	
3	14 to 24	Head of owner household
4	14 to 24	Head of renter household
5	14 to 24	Not head of household
6-8	25 to 44	Same groups as age group 14 to 24
9-11	45 and over	Same groups as age group 14 to 24
	Male nonwhite:	
12-22	Same groups as male white	
	Female white:	
23-33	Same groups as male white	
	Female nonwhite:	
34-44	Same groups as male white	

The sample weighting areas were defined as those areas within a State consisting of central cities of urbanized areas, the remaining portion of urbanized areas not in central cities, urban places not in urbanized areas, or rural areas.[2]

For each of the 44 groups, the ratio of the complete count to the sample count of the population in the group was determined. Each specific sample person in the group was assigned an integral weight so that the sum of the weights would equal the complete count for the group. For example, if the ratio for a group was 20.1, one-tenth of the persons (selected at random) within the group were assigned a weight of 21, and the remaining nine-tenths a weight of 20. The use of such a combination of integral weights rather than a single fractional weight was adopted to avoid the complications involved in rounding in the final tables. In order to increase the reliability, where there were fewer than 275 persons in the complete count in a group, or where the resulting weight was over 80, groups were combined in a specific order to satisfy both of these two conditions.

These ratio estimates reduce the component of sampling error arising from the variation in the size of household and achieve some of the gains of stratification in the selection of the sample, with the strata being the groups for which separate ratio estimates are computed. The net effect is a reduction in the sampling error and bias of most statistics below what would be obtained by weighting the results of the 5-percent sample by a uniform factor of twenty. The reduction in sampling error will be trivial for some items and substantial for others. A by-product of this estimation procedure, in general, is that estimates for this sample are generally consistent with the complete count with respect to the total population and for the subdivisions used as groups in the estimation procedure. A more complete discussion of the technical aspects of these ratio estimates will be presented in another report.

[1] Estimates of characteristics from the sample for a given area are produced using the formula:

$$x' = \sum_{i=1}^{44} \frac{x_i}{y_i} Y_i$$

where x' is the estimate of the characteristic for the area obtained through the use of the ratio estimation procedure,
x_i is the count of sample persons with the characteristic for the area in one (i) of the 44 groups,
y_i is the count of all sample persons for the area in the same one of the 44 groups, and
Y_i is the count of persons in the complete count for the area in the same one of the 44 groups.

[2] For the definitions of urbanized area and urban place, see 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary.

SAMPLING VARIABILITY

The figures from the 5-percent sample tabulations are subject to sampling variability, which can be estimated roughly from the standard errors shown in tables D and E below.

These tables[3] do not reflect the effect of response variance, processing variance, or bias arising in the collection, processing, and estimation steps. Estimates of the magnitude of some of these factors in the total error are being evaluated and will be published at a later date. The chances are about 2 out of 3 that the difference due to sampling variability between an estimate and the figure that would have been obtained from a complete count of the population is less than the standard error. The chances are about 19 out of 20 that the difference is less than twice the standard error and about 99 out of 100 that it is less than $2\frac{1}{2}$ times the standard error. The amount by which the estimated standard error must be multiplied to obtain other odds deemed more appropriate can be found in most statistical textbooks.

Table D.--ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED NUMBER

(Range of 2 chances out of 3)

Estimated number	Standard error	Estimated number	Standard error
50	30	5,000	280
100	40	10,000	390
250	60	15,000	480
500	90	25,000	620
1,000	120	50,000	880
2,500	200		

Table E.--ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED PERCENTAGE

(Range of 2 chances out of 3)

Estimated percentage	Base of percentage					
	500	1,000	2,500	10,000	25,000	100,000
2 or 98	3.3	2.3	1.3	0.8	0.3	0.3
5 or 95	5.0	4.0	2.3	1.0	0.5	0.3
10 or 90	7.0	5.0	3.0	1.5	0.8	0.5
25 or 75	10.0	6.8	3.8	1.8	1.0	0.5
50	11.0	7.8	4.0	2.0	1.3	0.8

[3] The estimates of sampling variability are based on calculations from a preliminary sample of the 1960 Census results. Further estimates are being calculated and will be available at a later date.

Table D shows rough standard errors of estimated numbers up to 50,000. The relative sampling errors of larger estimated numbers are somewhat smaller than for 50,000. For estimated numbers above 50,000, however, the nonsampling errors, e.g., response errors and processing errors, may have an increasingly important effect on the total error. Table E shows rough standard errors of data in the form of percentages. Linear interpolation in tables D and E will provide approximate results that are satisfactory for most purposes.

For a discussion of the sampling variability of medians and means and of the method for obtaining standard errors of differences between two estimates, see 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary.

Illustration: Table 10 shows that there are 11,238 male chemical engineers in the experienced civilian labor force in 1960 who had 1959 earnings in the range $8,000 to $9,999. Table D shows that the standard error of the 11,238 is about 412. This means that the chances are approximately 2 out of 3 that the results of a complete census would not differ by more than 412 from this estimated 11,238. It also follows that there is only about 1 chance in 100 that a complete census would differ by as much as 1,030, that is, by about $2\frac{1}{2}$ times the number estimated from table D.

PREFACE

This report presents statistics from the 1960 Census of Population on the social and economic characteristics of the workers in each industry in the United States. Also shown here are data on the characteristics of the persons in each of the four class-of-worker categories: Private wage and salary workers, government workers, self-employed workers, and unpaid family workers. The characteristics shown include race, age, hours worked, weeks worked in 1959, earnings in 1959, and years of school completed. In addition, industry is shown by urban-rural residence, class of worker, and income in 1959. Legal provision for this census, which was conducted as of April 1, 1960, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13 United States Code.

The major portion of the information compiled from the 1960 Census of Population appears in Volume I, Characteristics of the Population, which contains data for the United States, States and counties and their urban and rural parts, cities, minor civil divisions, etc. The present report is part of Volume II, Subject Reports, and is designated as PC(2)-7F. A list of the Volume II Subject Reports appears on the inside of the front cover. A summary description of all the final reports of the 1960 Population Census appears on page IV.

ACKNOWLEDGMENTS

Stanley Greene, Chief, William J. Milligan, and John A. Priebe of the Economic Statistics Branch, planned this report and developed its content, under the general direction of Murray S. Weitzman, Assistant Chief (Economic Statistics Programs), Population Division. Henry S. Shryock, Assistant Chief (Program Development), and David L. Kaplan, Assistant Chief (Methods Development), made important contributions in the planning and development of the entire series of Subject Reports. For the present report, Elizabeth A. Larmon assisted in the preparation of the introductory text, and Louise L. Douglas performed the technical editorial work. The procedures for compiling the data were devised by Richard A. Hornseth, Roger G. Bale, and Donald R. Dalzell of the Systems Division. The sampling materials were prepared by Robert Hanson, Warren J. Mitofsky and Easley Hoy of the Statistical Methods Division.

The census program was designed in consultation with a number of advisory committees and many individuals in order to maximize the usefulness of the data. Among the groups organized for this purpose were the Technical Advisory Committee for the 1960 Population Census, the Council of Population and Housing Census Users, and the Federal Agency Population and Housing Census Council (sponsored by the U.S. Bureau of the Budget). The persons who served with those groups represented a wide range of interest in the census program; their affiliations included universities, private industry, research organizations, labor groups, Federal agencies, State and local governments, and professional associations.

June 1967.

FINAL REPORTS OF THE 1960 CENSUS OF POPULATION

The final reports of the 1960 Population Census are arranged in three volumes and a joint Population-Housing series of census tract reports. The 1960 Population Census publication program also includes preliminary, advance, and supplementary reports, certain evaluation, procedural, and administrative reports, and graphic summaries. After publication, copies of all reports are available for examination or purchase at any U.S. Department of Commerce Field Office.

Certain types of unpublished statistics are available for the cost of preparing a copy of the data. Also, under certain conditions, special tabulations of the 1960 Census data can be prepared on a reimbursable basis. In addition, there are available for purchase magnetic tapes and punchcards containing 1960 Census information on the characteristics of a one-in-a-thousand and a one-in-ten-thousand sample of the population of the United States. Confidentiality of the information, as required by law, has been maintained by the omission of certain identification items. Further information about any of these materials can be obtained by writing to the Chief, Population Division, Bureau of the Census, Washington, D.C., 20233.

Volume I. Characteristics of the Population. This volume consists of separate reports for the United States, each of the 50 States, the District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. For each of these 57 areas, the data were first issued in four separate paper-bound "chapters," designated as PC(1)-A, B, C, and D. (For Guam, Virgin Islands, American Samoa, and Canal Zone, the material normally contained in chapters B, C, and D are included in chapter B.) For library and general reference use, the paper-bound reports have been assembled and reissued in buckram-bound books identified as Parts A and 1 to 57 of Volume I.

Series PC(1)-1A to 57A: Chapter A. Number of Inhabitants. These reports contain final population counts for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, all incorporated places, unincorporated places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1B to 57B: Chapter B. General Population Characteristics. These reports present statistics on sex, age, marital status, color or race, and relationship to head of household for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1C to 53C: Chapter C. General Social and Economic Characteristics. These reports cover the subjects of nativity and parentage, State of birth, country of origin of the foreign stock, mother tongue, place of residence in 1955, year moved into present house, school enrollment by level and type, years of school completed, families and their composition, fertility, veteran status, employment status, weeks worked in 1959, year last worked, occupation group, industry group, class of worker, place of work, means of transportation to work, and income of persons and families. Each subject is shown for some or all of the following areas: States and counties and their urban, rural-nonfarm, and rural-farm parts, standard metropolitan statistical areas, urbanized areas, and urban places.

Series PC(1)-1D to 53D: Chapter D. Detailed Characteristics. These reports present most of the subjects covered in chapter C, above, cross-classified by age, color, and other characteristics. There is also included additional information on families, as well as data on single years of age, detailed occupation, and detailed industry. Each subject is shown for some or all of the following areas: States and their urban, rural-nonfarm, and rural-farm parts; and large counties, cities, and standard metropolitan statistical areas.

Volume I, Part A: Number of Inhabitants. This is a compendium of the 57 chapter A reports, i.e., PC(1)-1A to 57A.

Volume I, Parts 1 to 57: Characteristics of the Population. The 57 parts relate respectively to the United States, each of the 50 States, District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. Each part contains the data previously published in the four chapters A, B, C, and D, and is in the form of a separate, buckram-bound book. Parts 54, 55, 56, and 57--for Guam, Virgin Islands, American Samoa, and Canal Zone, respectively--are bound in a single book.

Volume II (Series PC(2) reports). Subject Reports. Each report in this volume concentrates on a particular subject. Detailed information and cross-relationships are generally provided on a national and regional level; in a few reports data for States or standard metropolitan statistical areas are also shown. Among the characteristics covered are ethnic origin and race, fertility, families, migration, education, employment, unemployment, occupation, industry, and income. There is also a report on the geographic distribution and characteristics of inmates of institutions. A list of reports is given on the inside of the front cover.

Volume III (Series PC(3) reports). Selected Area Reports. Four of the reports in this volume present selected characteristics of the population for State economic areas, for standard metropolitan statistical areas, and according to the size and type of place where the individual resided. A fifth report provides data on the social and economic characteristics of Americans overseas.

Series PHC(1). Census Tract Reports. These reports present information on both population and housing subjects. There is one report for each of 180 tracted areas in the United States and Puerto Rico. The population subjects include age, race, marital status, country of origin of the foreign stock, relationship to head of household, school enrollment, years of school completed, place of residence in 1955, employment status, occupation group, industry group, place of work, means of transportation to work, and income of families, as well as certain characteristics of the nonwhite population in selected tracts. The housing subjects include tenure, color of head of household, vacancy status, condition and plumbing facilities, number of rooms, number of bathrooms, number of housing units in structure, year structure built, basement, heating equipment, number of persons in unit, persons per room, year household head moved into unit, automobiles available, value of property, and gross and contract rent, as well as certain characteristics of housing units with nonwhite household head for selected tracts. In addition, for selected tracts these reports contain data on certain population and housing subjects for persons of Puerto Rican birth or parentage and for white persons with Spanish surname. (This series is the same as the tract reports listed in the publication program for the 1960 Census of Housing.)

REGIONS AND GEOGRAPHIC DIVISIONS OF THE UNITED STATES

Industrial Characteristics

GENERAL

This report presents detailed national statistics on selected economic and social characteristics of men and women workers in each industry. The statistics in this report are based on a 5-percent sample of the population enumerated in the Eighteenth Decennial Census of Population, taken as of April 1, 1960.

Statistics on the social and demographic composition of the Nation's workers, in each industry, include such characteristics as age, race and color, years of school completed, marital status, and number of own children for women ever married. Also presented for each industry are data on such economic characteristics as employment status, hours worked, weeks worked in 1959, class of worker, and income and earnings in 1959. The above characteristics are shown for the Negro population of the United States in a Negro supplement included in this report.

The data in this report provide a broad basis for analyzing many of the factors affecting the industrial composition of the Nation's work force.

RELATED MATERIALS

1960 Census reports.--The present report supplements the reports for individual States and for the United States and its several regions and divisions, originally published in the 1960 Census of Population, Series PC(1)-C reports, "General Social and Economic Characteristics," and the Series PC(1)-D reports, "Detailed Characteristics." These reports form two of the four chapters of 1960 Census of Population, Volume I, Characteristics of the Population. Part 1 of Volume I presents data originally published in the four separate United States Summary reports; the remainder of the volume is divided into a part for each State and for the outlying areas containing data originally published in the separate paper-bound series.

In Volume I, industrial data are presented for the population as a whole, each State, standard metropolitan statistical area, urban place, and county. Cross-classifications of industrial data with occupation, earnings in 1959, age, class of worker, color, and sex, are presented in Volume I. The tables in the present report provide greater detail for analytical use at the national level.

Several of the Series PC(2) reports contain data on industry by various characteristics. The report PC(2)-7C, Occupation by Industry, contains national statistics cross-classifying detailed occupation by detailed industry for employed persons. The report PC(2)-7A, Occupational Characteristics, cross-classifies industry by occupation, color, and sex for the employed and employed wage and salary workers. Other related PC(2) reports present industrial data in relation to the subject of the report. Subjects covered in these reports are the labor reserve, persons by family characteristics, journey to work, nonwhite population by race, Puerto Ricans, and persons of Spanish surname.

The report PC(3)-1A, State Economic Areas, includes data on major industry groups for State economic areas by urban and rural residence. The report Series PC(3)-1D, Standard Metropolitan Statistical Areas, presents data on selected broad industry groups in the largest standard metropolitan statistical areas and in various types of groupings of SMSA's.

1950 Census reports.--Data for 1950 on industrial characteristics similar to those shown here were presented in the report entitled 1950 Census of Population, Volume IV, Special Reports, Part 1, chapter D, Industrial Characteristics. (For a discussion of 1950-1960 comparisons, see section on "Comparability.")

Current Population Survey.--Data on industry are also collected by the Bureau of the Census in the Current Population Survey (CPS), and statistics for selected groups are published monthly in percentage terms by the Bureau of Labor Statistics in Employment and Earnings. In 1960 the data for this survey were collected from a sample of approximately 35,000 households in 333 areas throughout the country. In addition, CPS data on major industry groups, in cross-classification with income, are published annually by the Census Bureau in Series P-60, Current Population Reports. The intercensal statistics provided by the Current Population Survey are, in general, designed to be comparable with the decennial statistics. There are, however, certain elements of difference as explained in the section on "Comparability."

AVAILABILITY OF UNPUBLISHED DATA

Data shown in this report can also be obtained on a reimbursable basis for regions, and for the total nonwhite population of the United States. Requests for special tabulations, giving a specific description of the figures desired, may be made by writing to the Chief, Population Division, Bureau of the Census, Washington, D.C. 20233. Inquiries concerning such data should be transmitted to the Bureau as soon as possible because tape files are not maintained indefinitely.

DEFINITIONS AND EXPLANATIONS

Some of the definitions used in 1960 differ from those used in 1950. These changes were made after consultation with users of census data in order to improve the statistics, even though it was recognized that comparability would be affected. The definitions and explanations should be interpreted in the context of the 1960 Censuses, in which data were collected by a combination of self-enumeration, direct interview, and observation by the enumerator.

The definitions below are consistent with the instructions given to the enumerator. As in all surveys, there were some failures to execute the instructions exactly. Through the forms distributed to households, the respondents were given explanations of some of the questions more uniformly than would have been given in direct interviews. Nevertheless, it was not feasible to give the full instructions to the respondents, and some erroneous replies have undoubtedly gone undetected.

More complete discussions of the definitions of population items are given in 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary, and in each of the State parts.

EMPLOYMENT STATUS

The data on employment status relate to the calendar week prior to the date on which the respondents filled their Household Questionnaires or were interviewed by enumerators. This week is not the same for all respondents because not all persons were enumerated during the same week.

Employed persons comprise all civilians 14 years old and over who were either (a) "at work"--those who did any work for pay or profit, or worked without pay for 15 hours or more on a family farm or in a family business; or (b) were "with a job but not at work"--those who did not work and were not looking for work but had a job or business from which they were temporarily absent because of bad weather, industrial dispute, vacation, illness, or other personal reasons.

Persons are classified as unemployed if they were 14 years old and over and not "at work" but looking for work. A person is considered as looking for work not only if he actually tried to find work but also if he had made such efforts recently (i.e., within the past 60 days) and was awaiting the results of these efforts. Persons waiting to be called back to a job from which they had been laid off or furloughed are also counted as unemployed. Unemployed persons who have worked at any time in the past are classified as the "experienced unemployed."

The "civilian labor force" includes all persons classified as employed or unemployed, as described above. The "labor force" also includes members of the Armed Forces (persons on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard). The "experienced civilian labor force" comprises the employed and the experienced unemployed.

Persons "not in the labor force" comprise all those 14 years old and over who are not classified as members of the labor force, including persons doing only incidental unpaid family work (less than 15 hours during the week).

HOURS WORKED

The statistics on hours worked pertain to the number of hours actually worked, and not necessarily to the number usually worked or the scheduled number of hours. For persons working at more than one job, the figures reflect the combined number of hours worked at all jobs during the week. The data on hours worked presented in this report provide a broad classification of persons at work into full-time and part-time workers. Persons are considered to be working full time if they worked 35 hours or more during the reference week and part time if they worked less than 35 hours.

The mean hours worked are obtained by dividing the total hours reported for a given industry group by the number of workers in that group.

INDUSTRY

The data on industry, as well as occupation and class of worker, were derived from answers to the following questions on the Household Questionnaire:

P27. Occupation *(Answer 1, 2, or 3)*

1. This person **last** worked in 1949 or earlier ... ☐
   This person has never worked ..... ☐

OR

2. On active duty in the Armed Forces now ..... ☐

OR

3. Worked in 1950 or later .. ☐ *Answer a to e, below.*

Describe this person's job or business last week, if any, and write in name of employer. If this person had no job or business last week, give information for last job or business since 1950.

a. For whom did he work?

.....
(Name of company, business, organization, or other employer)

b. What kind of business or industry was this?
Describe activity at location where employed.

.....
(For example: County junior high school, auto assembly plant, TV and radio service, retail supermarket, road construction, farm)

c. Is this primarily: *(Check one box)*

- Manufacturing ..... ☐
- Wholesale trade ..... ☐
- Retail trade ..... ☐
- Other (services, agriculture, government, construction, etc.) ... ☐

d. What kind of work was he doing?

.....
(For example: 8th grade English teacher, paint sprayer, repairs TV sets, grocery checker, civil engineer, farmer, farm hand)

e. Was this person: *(Check one box)*

- Employee of **private** company, business, or individual, for wages, salary, or commissions ..... ☐
- **Government** employee (Federal, State, county, or local) ..... ☐
- Self-employed in **own** business, professional practice, or farm ..... ☐
- Working **without pay** in a family business or farm ..... ☐

All three items related to one specific job held by the person. In the 1960 Census of Population, information on industry was collected for persons in the experienced civilian labor force as well as for persons not in the labor force who had worked some time during the period 1950 to April 1960. For an employed person, the information referred to the job he held during the reference week. If he was employed at two or more jobs, the job at which he worked the greatest number of hours during the reference week was reported. For experienced unemployed persons, i.e., unemployed persons who had previous job experience, and for those not in the labor force, the information referred to the last job that had been held.

The industrial classification system used in the 1960 Census of Population was developed in consultation with many individuals, private organizations, and government agencies.

Classification system.--The industrial classification system developed for the 1960 Census of Population is organized into 13 major industry groups and consists of 150 categories. For this report, the category "educational services" is shown for both government and private subgroupings. In addition, two other categories were combined resulting in a detailed industry list of 149 categories. An intermediate industry list is also used for some of the tables presented in this report. Its relationship to the detailed categories is shown in the list below. The composition of each specific category is shown in the publication, U.S. Bureau of the Census, 1960 Census of Population, Classified Index of Occupations and Industries, U.S. Government Printing Office, Washington, D.C., 1960.

Relation to Standard Industrial Classification.--The list presented below, in addition to showing the relationship between detailed and intermediate industry categories, also shows for each category the code designation of the similar category or categories in the Standard Industrial Classification (SIC). This relationship is presented here for general information purposes only and is not intended to imply complete comparability. The SIC, which was developed under the sponsorship of the U.S. Bureau of the Budget, is designed for the compilation of industry information based on establishment reports. These reports, by their nature and degree of detail, produce considerably different data on industry from those obtained from household enumerations such as the Census of Population. As a result, some of the distinctions called for in the SIC cannot be made in the 1960 Census. Furthermore, the data from the Census of Population are designed to meet different needs from those met by the establishment data. The allocation of government workers represents perhaps the most basic difference between the two systems. The SIC classifies all government agencies in a single major group. In the Population Census system, however, the category "public administration" includes only those activities which are uniquely governmental functions, such as legislative and judicial activities and most of the activities in the executive agencies. Government agencies engaged in educational and medical services and in activities commonly carried on also by private enterprises, such as transportation and manufacturing, are classified in the appropriate industrial category. For example, persons employed by a hospital are classified in the "hospitals" group, regardless of whether they are paid from private or public funds.

The total number of government workers is given in the class-of-worker statistics; of particular significance in this connection is the cross-classification of industry by class of worker shown in table 7.

Relation to certain occupation groups.--In the Population Census classification systems, the industry category "agriculture" is somewhat more inclusive than the total of the two major occupation groups, "farmers and farm managers" and "farm laborers and foremen." The industry category also includes (a) persons employed on farms in occupations such as truck driver, mechanic, and bookkeeper, and (b) persons engaged in agricultural activities other than strictly farm operation, such as crop dusting or spraying, cotton ginning, and landscape gardening. Similarly, the industry category "private households" is somewhat more inclusive than the major occupation group "private household workers." In addition to the baby sitters, housekeepers, laundresses, and miscellaneous types of domestic workers covered by the major occupation group, the industry category includes persons in occupations such as chauffeur, gardener, and secretary, if they work for private families.

Comparability

Earlier censuses.--Changes in schedule design and interviewing techniques between 1950 and 1960 may have affected comparability for some of the industrial categories. For example, a person may have reported the industry in which he works differently under the self-enumeration procedure of 1960, when he is given the opportunity to report for himself. In the 1950 direct enumeration procedure, job descriptions were normally obtained in an interview with a member of the worker's family (usually his wife). In addition, a new item, the name of the employer (company name) was used extensively in 1960 to assign the proper industry classification through the use of lists of employers which show their industrial classification in the 1958 Economic Censuses.

A change in editing procedures also affected the data. In 1950 all those who did not report employment status were allocated to "Not in the labor force." However, in 1960 about half of the employment status not reported cases were allocated to the labor force. Nearly all persons who did not report employment status also failed to answer the industry item. Thus, these allocations to the labor force caused the 1960 industry not reported rate to be higher relative to 1950. There were about 2 million persons allocated to the experienced civilian labor force in 1960. This amounts to 77 percent of the 2.6 million persons for whom industry was not reported.

The industrial classification system used in 1940 and 1950 is basically the same as that of 1960. There are a number of differences, however, in title and content for certain items, as well as in the degree of detail shown for the various major groups. Charts comparing the industrial categories used in the 1940, 1950, and 1960 Censuses can be obtained by writing to the Chief, Population Division, Bureau of the Census, Washington, D.C. 20233.

RELATIONSHIPS BETWEEN THE DETAILED AND INTERMEDIATE INDUSTRIAL CLASSIFICATION SYSTEMS USED IN THE 1960 CENSUS OF POPULATION

(Figures in parentheses in the second column are code designations in the Standard Industrial Classification; see text for explanation)

Intermediate classification--71 items	Detailed classification--149 items
Agriculture	Agriculture (01, 02, 07 except 0713).
Forestry and fisheries	Forestry (08). Fisheries (09).
Mining	Metal mining (10). Coal mining (11, 12). Crude petroleum and natural gas extraction (13). Nonmetallic mining and quarrying, except fuel (14).
Construction	Construction (15-17).
Logging	Logging (241).
Sawmills, planing mills, millwork and miscellaneous wood products	Sawmills, planing mills and millwork (242,243). Miscellaneous wood products (244,249).
Furniture and fixtures	Furniture and fixtures (25).
Primary iron and steel industries	Blast furnaces, steel works, and rolling and finishing mills (3312, 3313). Other primary iron and steel industries (3315-3317, 332, 3391, 3399[1]).
Primary nonferrous industries	Primary nonferrous industries (333-336, 3392, 3399[1]).
Fabricated metal industries (including not specified metal)	Cutlery, hand tools and other hardware (342). Fabricated structural metal products (344). Miscellaneous fabricated metal products (341, 343, 345-349, 19 except 194). Not specified metal industries.[2]
Machinery, except electrical	Farm machinery and equipment (352). Office, computing, and accounting machines (357). Miscellaneous machinery (351, 353-356, 358, 359).
Electrical machinery, equipment, and supplies	Electrical machinery, equipment, and supplies (36).
Motor vehicles and motor vehicle equipment	Motor vehicles and motor vehicle equipment (371).
Aircraft and parts	Aircraft and parts (372).
Other transportation equipment	Ship and boat building and repairing (373). Railroad and miscellaneous transportation equipment (374, 375, 379).
Stone, clay, and glass products	Glass and glass products (321-323). Cement and concrete, gypsum, and plaster products (324, 327). Structural clay products (325). Pottery and related products (326). Miscellaneous nonmetallic mineral and stone products (328, 329).
All other durable goods	Professional equipment and supplies (381-385, 194). Photographic equipment and supplies (386). Watches, clocks, and clockwork-operated devices (387). Miscellaneous manufacturing industries (39).
Meat products	Meat products (201).
Bakery products	Bakery products (205).
Other food industries	Dairy products (202). Canning and preserving fruits, vegetables, and sea foods (203). Grain-mill products (204, 0713). Confectionery and related products (207). Beverage industries (208). Miscellaneous food preparations and kindred products (206, 209). Not specified food industries.[2]
Knitting mills	Knitting mills (225).
Yarn, thread, and fabric mills	Yarn, thread, and fabric mills (221-224, 228)
Other textile mill products	Dyeing and finishing textiles, except wool and knit goods (226). Floor coverings, except hard surface (227). Miscellaneous textile mill products (229).
Apparel and other fabricated textile products	Apparel and accessories (231-238). Miscellaneous fabricated textile products (239).
Printing, publishing, and allied industries	Newspaper publishing and printing (271). Printing, publishing, and allied industries, except newspapers (272-279).
Chemicals and allied products	Synthetic fibers (2823, 2824). Drugs and medicines (283). Paints, varnishes, and related products (285). Miscellaneous chemicals and allied products (281, 282 except 2823 and 2824, 284, 286-289).
Paper and allied products	Pulp, paper, and paperboard mills (261-263, 266). Paperboard containers and boxes (265). Miscellaneous paper and pulp products (264).
Petroleum and coal products	Petroleum refining (291). Miscellaneous petroleum and coal products (295, 299).
Rubber and miscellaneous plastic products	Rubber products (301-303, 306). Miscellaneous plastic products (307).
Footwear, except rubber	Footwear, except rubber (313, 314).
All other nondurable goods	Tobacco manufactures (21). Leather products, except footwear (312, 315-317, 319) Leather: tanned, curried, and finished (311).
Not specified manufacturing industries	Not specified manufacturing industries.[2]
Trucking service and warehousing	Trucking service (421, 423). Warehousing and storage (422).
Railroads and railway express service	Railroads and railway express service (40).
Street railways and bus lines	Street railways and bus lines (411, 413-415, 417).
Water transportation	Water transportation (44).
Air transportation	Air transportation (45).
All other transportation	Taxicab service (412). Petroleum and gasoline pipe lines (46). Services incidental to transportation (47).

See footnotes at end of list.

RELATIONSHIPS BETWEEN THE DETAILED AND INTERMEDIATE INDUSTRIAL CLASSIFICATION SYSTEMS USED IN THE 1960 CENSUS OF POPULATION--Continued

Intermediate classification--71 items	Detailed classification--149 items
Communications	Radio broadcasting and television (483). Telephone (wire and radio) (481). Telegraph (wire and radio) (482, 489).
Electric and gas utilities	Electric light and power, and electric-gas utilities (491, 493).[3] Gas and steam supply systems (492, 496).
Water supply, sanitary services, and other utilities	Water supply (494). Sanitary services (495). Other and not specified utilities (497).
Wholesale trade	Motor vehicles and equipment (501). Drugs, chemicals, and allied products (502). Dry goods and apparel (503). Food and related products (504). Farm products--raw materials (505). Electrical goods, hardware, and plumbing equipment (506, 507). Machinery, equipment, and supplies (508). Petroleum products (5092). Miscellaneous wholesale trade (5091, 5093-5099). Not specified wholesale trade.[2]
Food and dairy products stores and milk retailing	Food and dairy products stores (54).[4]
Eating and drinking places	Eating and drinking places (58).
General merchandise and limited price variety stores	General merchandise retailing (53 except 533). Limited price variety stores (533).
Apparel and accessories stores	Apparel and accessories stores, except shoe stores (56 except 566). Shoe stores (566).
Furniture, home furnishings, and equipment stores	Furniture and housefurnishings stores (571). Household appliance, TV, and radio stores (572, 573).
Motor vehicles and accessories retailing	Motor vehicles and accessories retailing (55 except 554).
Gasoline service stations	Gasoline service stations (554).
Drug stores	Drug stores (591).
Hardware, farm implement, and building material retailing	Hardware and farm equipment stores (525). Lumber and building material retailing (521-524).
All other retail trade	Liquor stores (592). Retail florists (5992). Jewelry stores (597). Fuel and ice dealers (598). Miscellaneous retail stores (593-596, 599 except 5992). Not specified retail trade.[2]
Banking and other finance	Banking and credit agencies (60, 61). Security and commodity brokerage and investment companies (62, 67).
Insurance and real estate	Insurance (63, 64). Real estate (including real estate-insurance-law offices) (65, 66).
Business services	Advertising (731). Miscellaneous business services (732-736, 739).
Automobile repair services and garages	Automobile repair services and garages (75).
Miscellaneous repair services	Miscellaneous repair services (76).
Private households	Private households (88).
Hotels and lodging places	Hotels and lodging places (70).
Laundering, cleaning, and dyeing services	Laundering, cleaning, and dyeing services (721, 727).
All other personal services	Dressmaking shops (729).[5] Shoe repair shops (725). Barber and beauty shops (723, 724). Miscellaneous personal services (722, 726, 729).[5]
Entertainment and recreation services	Theaters and motion pictures (78, 792). Bowling alleys and billiard and pool parlors (793). Miscellaneous entertainment and recreation services (791, 794).
Educational services, government	Educational services, government Educational services, private (82, 84).
Educational services, private	
Welfare, religious, and membership organizations	Nonprofit membership organizations (861-865, 869). Welfare and religious services (866, 867).
Legal, engineering, and miscellaneous professional services	Legal services (81). Engineering and architectural services (891). Accounting, auditing, and bookkeeping services (893). Miscellaneous professional and related services (892, 899).
Medical and other health services	Medical and other health services, except hospitals (80 except 806). Hospitals (806).
Postal service	Postal service Federal public administration (91, 94).[6]
Federal public administration	
State and local public administration	State public administration (92).[6] Local public administration (93).[6]
Industry not reported	Industry not reported (99).

NOTE: See Executive Office of the President, Bureau of the Budget, Standard Industrial Classification Manual, 1957 edition.

[1] The components of SIC category 3399 are allocated between "Other primary iron and steel industries" and "Primary nonferrous industries" on a ferrous-nonferrous basis.

[2] In the Population Census system, "not specified" categories were set up within certain groups to take care of schedule returns which were not sufficiently precise for allocation to a specific category within the group.

[3] This item represents a combination of two categories in the 1960 Census industrial classification system--"Electric light and power" and "Electric-gas utilities."

[4] This item represents a combination of two categories in the 1960 Census industrial classification system--"Food stores, except dairy products" and "Dairy products stores and milk retailing."

[5] Dressmaking shops are separated from the rest of the SIC category 729 which is included in "Miscellaneous personal services."

[6] See text for explanation of basic difference between SIC and Population Census in classification of government workers.

Current Population Survey.--The differences that exist between the national data from the Population Census and the CPS are due to a number of factors. Among these are the more extensive training, control, and experience of the CPS enumerators; differences in the time period to which the labor force data apply (the CPS covering the week containing the 12th of the month whereas the census covered the week prior to the date the respondent filled his questionnaire or was interviewed); differences in question wording and format of the schedules; differences in the methods used to process the original data into statistical tables; differences in the weighting procedure and in the population controls; differences in noninterview rates and the treatment of noninterview cases; and the sampling variability in the CPS and in the 5-percent sample used in this report. For further comparisons of CPS and census data, see section below on "Quality of data on industry."

Other data.--Comparability between statistics presented in this report and statistics from other sources is frequently affected by differences in concepts and definitions. Because the 1960 Census employment data were obtained from households, they differ from statistics based on reports from individual business establishments, farm enterprises, and certain government programs. In data shown here, persons employed at more than one job are counted only once as employed and are classified according to the job at which they worked the greatest number of hours during the reference week. In statistics based upon reports from business and farm establishments, on the other hand, persons who worked for more than one establishment may be counted more than once. Moreover, establishment data, unlike those presented here, generally exclude private household workers, unpaid family workers, and self-employed persons, and may include workers less than 14 years of age. An additional difference arises from the fact that persons with a job but not at work are included with the employed in the statistics shown here, whereas only part of this group is likely to be included in employment figures based on establishment payroll reports. In addition, comparability between the statistics presented here and statistics from other sources is also frequently affected by the use of different classification systems. See section above on "Relation to Standard Industrial Classification."

Quality of Data on Industry

Many of the figures shown here are probably subject to some understatement because of the omission of some marginal workers from the count of employed persons. For example, housewives, students, and semi-retired persons, who are in the labor force on only a part-time or intermittent basis, may fail to report they are employed. These omissions arise from the difficulty of applying certain of the employment status concepts, and, perhaps more important, from the fact that complete information is not always obtained for certain groups. The age group with the largest relative difference in the number of persons in the labor force in the 1960 Census and the Current Population Survey was the group for 14 to 24 years old. This group has a relatively large proportion of persons in the labor force who work part time (33.2 percent) and who, therefore, may fail to report that they are employed. The estimated size of the employed population in the United States in April 1960 based on the Current Population Survey was slightly over 2 percent above the corresponding census figure.

The application of a detailed industrial classification to approximately 65 million workers is obviously subject to some error. Although the number of misclassifications probably does not have any serious effect on the usefulness of the data, there are a few cases where relatively small numbers of erroneous returns may produce what might be regarded as a serious misstatement of the facts. Some of the more obvious misclassifications have been edited, but it was not possible to perform a complete review of the data for all discrepancies.

More information on quality of the data can be obtained in Evaluation and Research Program of the U.S. Censuses of Population and Housing 1960: Accuracy of Data on Population Characteristics as Measured by CPS-Census Match, Series ER 60, No. 5; and The Employer Record Check, Series ER 60, No. 6. These publications are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or any of the Field Offices of the Department of Commerce.

CLASS OF WORKER

The class-of-worker information refers to the same job as the industry information. The assignment of a person to a particular class-of-worker category is basically independent, however, of the industry in which he worked. The classification by class of worker consists of four categories which are defined as follows:

1. Private wage and salary workers.--Persons who worked for a private employer for wages, salary, commission, tips, pay-in-kind, or at piece rates.

2. Government workers.--Persons who worked for any governmental unit (Federal, State, local, or international), regardless of the activity which the particular agency carried on.

3. Self-employed workers.--Persons who worked for profit or fees in their own business, profession, or trade, or who operated a farm either as an owner or tenant. Included here are the owner-operators of large stores and manufacturing establishments as well as small merchants, independent craftsmen and professional men, farmers, peddlers, and other persons who conducted enterprises of their own. Persons paid to manage businesses owned by other persons or by corporations, on the other hand, are classified as private wage and salary workers (or, in some few cases, as government workers).

4. Unpaid family workers.--Persons who worked without pay on a farm or in a business operated by a person to whom they are related by blood or marriage. About one-half of the unpaid family workers are farm laborers.

Wage and salary workers include private wage and salary workers and government workers, as defined above.

The relatively small number of employed persons for whom class of worker was not reported have been included among private wage and salary workers unless there was evidence on the census schedule that they should have been classified in one of the other class-of-worker categories.

MEDIAN

The median is presented in connection with the data on age, years of school completed, and income. It is the value which divides the distribution into two equal parts, one-half the cases falling below this value and one-half the cases exceeding this value.

A plus (+) or minus (-) sign after the median indicates that the median is above or below that number. For example, a median of $10,000+ for income indicates that the median fell in the interval "$10,000 or more."

URBAN-RURAL RESIDENCE

In general, the urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, according to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas; (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

FARM-NONFARM RESIDENCE

The rural population is subdivided into the rural-farm population, which comprises all rural residents living on farms, and the rural-nonfarm population, which comprises the remaining rural population. In the 1960 Census, the farm population consists of persons living in rural territory on places of 10 or more acres from which sales of farm products amounted to $50 or more in 1959 or on places of less than 10 acres from which sales of farm products amounted to $250 or more in 1959. All persons living in group quarters are classified as nonfarm except the relatively few living in workers' quarters (including quarters for migratory agricultural workers) that are located on a farm or ranch.

AGE

The age classification is based on the age of the person in completed years as of April 1, 1960, as determined from the reply to a question on month and year of birth.

RACE AND COLOR

The term "color" refers to the division of population into two groups, white and nonwhite. The color group designated as "nonwhite" consists of such races as the Negro, American Indian, Japanese, Chinese, Filipino, Korean, Hawaiian, Asian Indian, Eskimo, Aleut, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Negro.--In addition to persons of Negro and of mixed Negro and white descent this classification includes persons of mixed Indian and Negro descent, unless the Indian ancestry predominates or unless the individual is regarded as an Indian in the community.

American Indian.--In addition to full blooded Indians, persons of mixed white and Indian blood are included if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community. Indians living in Indian territory or on reservations were not included in the population until 1890.

Other races.--Table 25 of this report shows separate statistics for Japanese, Chinese, and Filipinos. The category "other races" includes Koreans, Hawaiians, Asian Indians, Eskimos, Aleuts, Malayans, etc. In table 3 the term "other races" includes all "nonwhite" races except Negro.

Mixed parentage.--Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the special exceptions noted above.

YEARS OF SCHOOL COMPLETED

The data on years of school completed were derived from the answers to the two questions: (a) "What is the highest grade (or year) of regular school he has ever attended?" and (b) "Did he finish this grade (or year)?" Enumerators were instructed to obtain the approximate equivalent grade in the American school system for persons whose highest grade of attendance was in a foreign school system, whose highest level of attendance was in an ungraded school, whose highest level of schooling was measured by "readers," or whose training by a tutor was regarded as qualifying under the "regular" school definition. Persons were to answer "No" to the second question if they were attending school, had completed only part of a grade before they dropped out, or failed to pass the last grade attended.

The number in each category of highest grade of school completed represents the combination of (a) persons who reported that they had attended the indicated grade and finished it, and (b) those who had attended the next higher grade but had not finished it.

The questions on educational attainment applied only to progress in "regular" schools. Regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional degree. Schooling that was not obtained in a regular school and schooling from a tutor or through correspondence courses were counted only if the credits obtained were regarded as transferable to a school in the regular school system. Schooling which is generally regarded as not regular includes that which is given in nursery schools, in specialized vocational, trade, or business schools; in on-the-job training; and through correspondence courses.

Elementary school, as defined here, includes grades 1 to 8, and high school includes grades 9 to 12. College includes junior or community colleges, regular 4-year colleges, and graduate or professional schools.

MARITAL STATUS

This classification refers to the marital status of the person at the time of enumeration. Persons classified as "married" comprise, therefore, both those who have been married only once and those who remarried after having been widowed or divorced. Persons reported as separated (either legally separated or otherwise absent from the spouse because of marital discord) are classified as a subcategory of married persons. The enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Persons "ever married" are those in the categories married (including separated), widowed, and divorced.

The number of married men may be different from the number of married women for an area because of the absence of husbands or wives from the country, because the husband and wife have different places of residence, because the sample data were inflated separately for men and women, or for other reasons.

A married person with "spouse present" is a man or woman whose spouse was enumerated as a member of the same household even though he or she may have been temporarily absent on business or vacation, visiting, in a hospital, etc., at the time of enumeration.

Persons classified as "married spouse absent" include both those who are separated because of marital discord and those whose spouse is absent for other reasons, such as service in the Armed Forces or employment at a considerable distance from home.

OWN CHILD

An own child of a woman ever married is defined here as a single (never married) son, daughter, stepchild, or adopted child of the woman. Only those children who are present in the home are included in the count of women by number of own children.

WEEKS WORKED IN 1959

The data on weeks worked in 1959 pertain to the number of different weeks during 1959 in which a person did any work for pay or profit (including paid vacation and sick leave) or worked without pay on a family farm or in a family business. Weeks of active service in the Armed Forces are also included.

INCOME IN 1959

Information on income for the calendar year 1959 was requested from all persons 14 years old and over in the sample. "Total income" is the sum of amounts reported separately for wage or salary income, self-employment income, and other income. Wage or salary income is defined as the total money earnings received for work performed as an employee. It represents the amount received before deductions for personal income taxes, Social Security, bond purchases, union dues, etc. Self-employment income is defined as net money income (gross receipts minus operating expenses) from a business, farm, or professional enterprise in which the person was engaged on his own account. Earnings are the sum of wage and salary income and self-employment income. Other income includes money income received from such sources as net rents, interest, dividends, Social Security benefits, pensions, veterans' payments, unemployment insurance, and public assistance or other governmental payments, and periodic receipts from insurance policies or annuities. Not included as income are money received from the sale of property (unless the recipient was engaged in the business of selling such property), the value of income "in kind," withdrawals of bank deposits, money borrowed, tax refunds, and gifts and lump-sum inheritances or insurance payments.

COLLECTION AND PROCESSING OF DATA

COLLECTION OF DATA

Several enumeration forms were used to collect the information for the 1960 Census of Population. A few days before the census date, the Post Office Department delivered an Advance Census Report (ACR) to households on postal delivery routes. This form contained questions which were to be answered for every person and every housing unit. Household members were requested to fill the ACR and have it ready for the enumerator. The census enumerator recorded this information on a form specially designed for electronic data processing by FOSDIC (Film Optical Sensing Device for Input to Computer). The information was either transcribed from the ACR to the complete-count FOSDIC schedule or entered on this schedule during direct interview.

Additional questions on social, demographic, and conomic characteristics, including the industry ques-ion, were asked at one-fourth of the households. In ne densely populated areas, the enumerator left a ousehold Questionnaire to be completed by all occu-ants of these sample housing units. The completed uestionnaire was mailed to the local census office nd the information was transcribed from the Household uestionnaire to a sample FOSDIC schedule. When the ousehold Questionnaire was not returned or was re-rned without having been completed, the enumerator ollected the missing information by personal visit or r telephone and entered it directly on the sample SDIC schedule. In the remaining areas, when the umerator picked up the ACR, he obtained all the in-rmation by direct interview and recorded it directly the sample FOSDIC schedule.

Soon after the enumerator started work, his sched-es were examined in a formal field review. This op-ation was designed to assure at an early stage of e work that the enumerator was performing his duties perly and had corrected any errors he had made.

More detailed descriptions of the 1960 Census ocedures in the collection and processing of the data e given in reports entitled United States Censuses Population and Housing, 1960: Principal Data Col-ction Forms and Procedures, 1961; and Processing e Data, 1962, U.S. Government Printing Office, Wash-gton, D.C. 20402.

MANUAL EDITING AND CODING

After the FOSDIC forms had been checked for com-eteness in the field, they were sent to a central ocessing office for manual editing and coding and r microfilming. Except where some special problems ose, there was no manual coding of the FOSDIC forms complete-count data. On the sample forms, the nual operation was limited to those items where cod-g required the reading of written entries and there-re could not be done effectively by machine. The ding clerks converted the written entries to codes marking the appropriate circles on the FOSDIC nedules and at the same time were able to correct viously wrong entries and sometimes supply missing formation.

ELECTRONIC PROCESSING

After the enumerators and coders recorded the formation by marking the appropriate circles, the hedules were microfilmed. The information on the crofilm was then read by FOSDIC, which converted the rkings to signals on magnetic tape. The tape, in n, was processed in an electronic computer, which s used extensively to edit and tabulate the data and produce the publication tables.

EDITING

For a majority of items, nonresponses and incon-sistencies were eliminated by using the computer assign entries and correct inconsistencies. In general, few assignments or corrections were required, although the amount varied by subject and by enumerator.

The assignment of an acceptable entry by machine was based on related information reported for the person or on information reported for a similar person in the immediate neighborhood. For example, in the assignment of age in the complete-count tabulations, the computer stored reported ages of persons by sex, color or race, household relationship, and marital status; each stored age was retained in the computer only until a succeeding person having the same characteristics and having age reported was processed through the computer; this stored age was assigned to the next person whose age was unknown and who otherwise had the same characteristics. This procedure insured that the distribution of ages assigned by the computer for persons of a given set of characteristics would correspond closely to the reported age distribution of such persons as obtained in the current census.

It was decided that, because of the great variety of industries, allocation for omission of entries was not feasible. Therefore, persons whose industrial information was lacking were generally classified as "not reported." However, assignments of industry codes were made in cases of certain omissions and inconsistencies. These assignments were made on the basis of obvious relationships existing between certain occupations, industries, and class of worker.

If, for example, there was no industry reported, but an occupation of "farmer" was reported, the industry code for agriculture was assigned.

When class of worker was blank, the following codes were assigned:

a. If the industry was agriculture and

(1) Occupation was farmers or farm service laborers, self-employed, the class of worker was made self-employed.

(2) Occupation was farm laborers, unpaid family workers, the class of worker was made unpaid family workers.

b. If the industry code was public administration, the class of worker was made government worker.

The extent of the allocations for nonresponse or for inconsistency is shown for the United States and for States, places of 10,000 inhabitants or more, and other areas in appendix tables in chapters B, C, and D of 1960 Census of Population, Volume I, Characteristics of the Population.

Specific tolerances were established for the number of computer allocations acceptable for a given area. If the number was beyond tolerance, the data were rejected and the original schedules were re-examined to determine the source of the error. Correction and reprocessing were undertaken as necessary and feasible.

ACCURACY OF THE DATA

Human and mechanical errors occur in any mass statistical operation such as a decennial census. Such errors include failure to obtain required information from respondents, obtaining inconsistent information,

recording information in the wrong place or incorrectly, or otherwise producing inconsistencies between entries on interrelated items on the field documents. Sampling biases occur because some of the enumerators fail to follow the sampling instructions. Clerical coding and editing errors occur, as well as errors in the electronic processing operation.

Careful efforts are made in every census to keep the errors in each step at an acceptably low level. Review of the enumerator's work, verification of manual coding and editing, checking of tabulated figures, and ratio estimation of sample data to control totals from the complete count reduce the effects of the errors in the sample data.

In printed tables produced by the computer, very small differences may sometimes occur between tables because of the nature of computer transfers of data. No attempt has been made to reconcile these minor discrepancies.

Some innovations in the 1960 Censuses reduced errors in processing and others produced a more consistent quality of editing. The elimination of the card-punching operation removed one important source of error. The extensive use of electronic equipment insured a more uniform and more flexible edit than could have been accomplished manually or by less intricate mechanical equipment. It is believed that the use of electronic equipment in the 1960 Censuses has improved the quality of the editing compared with that of earlier censuses but, at the same time, it has introduced an element of difference in the statistics.

Evaluative material on accuracy of data contained in this report can be found in Evaluation and Research Program of the U.S. Censuses of Population and Housing 1960, reports 5 and 6. A report entitled, The Post-Enumeration Survey: 1950, Technical Paper No. 4, presents evaluative material on the 1950 Census.

SAMPLE DESIGN AND SAMPLING VARIABILITY

SAMPLE DESIGN

For persons in housing units at the time of the 1960 Census, the sampling unit was the housing unit and all its occupants; for persons in group quarters, it was the person. On the first visit to an address, the enumerator assigned a sample key letter (A, B, C, or D) to each housing unit sequentially in the order in which he first visited the units, whether or not he completed an interview. Each enumerator was given a random key letter to start his assignment, and the order of canvassing was indicated in advance, although these instructions allowed some latitude in the order of visiting addresses. Each housing unit to which the key letter "A" was assigned was designated as a sample unit, and all persons enumerated in the unit were included in the sample. In every group quarters, the sample consisted of every fourth person in the order listed. The 1960 statistics in this report are based on a subsample of one-fifth of the original 25-percent sample schedules. The subsample was selected on the computer, using a stratified systematic sample design. The strata were made up as follows: For persons in regular housing units there were 36 strata, i.e., 9 household size groups by 2 tenure groups by 2 color groups; for persons in group quarters, there were 2 strata, i.e., the 2 color groups.

Although the sampling procedure did not automatically insure an exact 5-percent sample of persons, the sample design was unbiased. Generally, for large areas, the deviation from the estimated sample size was found to be quite small. Biases may have arisen, however, when the enumerator failed to follow his listing and sampling instructions exactly.

Table A compares the distribution by major industry group of employed persons, as presented in this report, based on the 5-percent sample, with corresponding statistics based on the 25-percent sample presented in Volume I of the 1960 Census of Population. Differences in this table reflect primarily sampling error.

Table A.--INDUSTRY--COMPARISON OF 25-PERCENT AND 5-PERCENT SAMPLE DATA ON MAJOR INDUSTRY GROUP OF EMPLOYED PERSONS, BY SEX, FOR THE UNITED STATES: 1960

Major industry group and sex	Source of estimate		Major industry group and sex	Source of estimate	
	25-percent sample	5-percent sample		25-percent sample	5-percent sample
Male, employed	43,466,955	43,490,888	Female, employed	21,172,301	21,15[illegible]
Agriculture, forestry, and fisheries	3,932,225	3,926,430	Agriculture, forestry, and fisheries	417,659	417,8[illegible]
Mining	622,146	623,173	Mining	31,860	3[illegible],8
Construction	3,662,393	3,665,848	Construction	153,549	151,8[illegible]
Manufacturing	13,111,965	13,122,573	Manufacturing	4,401,121	4,40[illegible],1
Transportation, communication, and other public utilities	3,687,448	3,688,833	Transportation, communication, and other public utilities	770,699	769,7[illegible]
Wholesale and retail trade	7,398,070	7,409,138	Wholesale and retail trade	4,394,565	4,38[illegible]
Finance, insurance, and real estate	1,464,283	1,463,978	Finance, insurance, and real estate	1,230,347	1,231,[illegible]
Business and repair services	1,269,946	1,271,250	Business and repair services	340,782	338,7[illegible]
Personal services	1,082,577	1,089,602	Personal services	2,775,917	2,76[illegible]
Entertainment and recreation services	345,633	344,643	Entertainment and recreation services	157,246	155,[illegible]
Professional and related services	3,018,792	3,013,163	Professional and related services	4,559,054	4,561,[illegible]
Public administration	2,288,760	2,285,402	Public administration	914,134	90[illegible]
Industry not reported	1,582,717	1,586,855	Industry not reported	1,025,368	1,02[illegible]

RATIO ESTIMATION

The statistics based on the 5-percent sample of ...e 1960 Census returns are estimates that have been ...veloped through the use of a ratio estimation pro...dure. This procedure was carried out for each of ...e following 44 groups of persons in each of the ...mple weighting areas:[1]

...our	Sex, color, and age	Relationship and tenure
	Male white:	
	Under 5	
	5 to 13	
	14 to 24	Head of owner household
	14 to 24	Head of renter household
	14 to 24	Not head of household
-8	25 to 44	Same groups as age group 14 to 24
-11	45 and over	Same groups as age group 14 to 24
	Male nonwhite:	
-22	Same groups as male white	
	Female white:	
-33	Same groups as male white	
	Female nonwhite:	
-44	Same groups as male white	

...e sample weighting areas were defined as those areas ...thin a State consisting of central cities of urban...ed areas, the remaining portion of urbanized areas ...t in central cities, urban places not in urbanized ...eas, or rural areas.[2]

For each of the 44 groups, the ratio of the com...lete count to the sample count of the population in ...e group was determined. Each specific sample person ... the group was assigned an integral weight so that ...e sum of the weights would equal the complete count ...r the group. For example, if the ratio for a group ...s 20.1, one-tenth of the persons (selected at random) ...thin the group were assigned a weight of 21, and the ...maining nine-tenths a weight of 20. The use of such ...combination of integral weights rather than a single ...actional weight was adopted to avoid the complica...ons involved in rounding in the final tables. In ...der to control a potential bias in the estimates, ...ere there were fewer than 275 persons in the com...ete count in a group, or where the resulting weight ...s over 80, groups were combined in a specific order ... satisfy both of these two conditions.

[1] Estimates of characteristics from the sample for a given ...a are produced using the formula:

$$x' = \sum_{i=1}^{44} \frac{x_i}{y_i} Y_i$$

...ere x' is the estimate of the characteristic for the area obtained through the use of the ratio estimation procedure,
x_i is the count of sample persons with the characteristic for the area in one (i) of the 44 groups,
y_i is the count of all sample persons for the area in the same one of the 44 groups, and
Y_i is the count of persons in the complete count for the area in the same one of the 44 groups.

[2] For the definitions of urbanized area and urban place, see ... Census of Population, Volume I, Characteristics of the Popu...tion, Part 1, United States Summary.

These ratio estimates reduce the component of sampling error arising from the variation in the size of household and achieve some of the gains of stratification in the selection of the sample, with the strata being the groups for which separate ratio estimates are computed. The net effect is a reduction in the sampling error of most statistics below what would be obtained by weighting the results of the 5-percent sample by a uniform factor of twenty. The reduction in sampling error will be trivial for some items and substantial for others. A byproduct of this estimation procedure, in general, is that estimates for this sample are generally consistent with the complete count with respect to the total population and for the subdivisions used as groups in the estimation procedure.

SAMPLING VARIABILITY

The figures from the 5-percent sample tabulations are subject to sampling variability, which can be estimated roughly from the standard errors shown in tables B and C.

These tables do not reflect the effect of response variance, processing variance, or bias arising in the collection, processing, and estimation steps. Estimates of the magnitude of some of these factors in the total error are being evaluated and are being published in reports in Series ER 60, Evaluation and Research Program of the U.S. Census of Population and Housing: 1960. The chances are about two out of three that the difference due to sampling variability between an estimate and the figure that would have been obtained from a complete count of the population is less than the standard error. The chances are about 19 out of 20 that the difference is less than twice the standard error and about 99 out of 100 that it is less than 2½ times the standard error. The amount by

Table B.--ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED NUMBER

(Range of 2 chances out of 3)

Estimated number	Standard error	Estimated number	Standard error
50	30	5,000	280
100	40	10,000	390
250	60	15,000	480
500	90	25,000	620
1,000	120	50,000	880
2,500	200		

Table C.--ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED PERCENTAGE

(Range of 2 chances out of 3)

Estimated percentage	Base of percentage					
	500	1,000	2,500	10,000	25,000	100,000
2 or 98	3.3	2.3	1.3	0.8	0.3	0.3
5 or 95	5.0	4.0	2.3	1.0	0.5	0.3
10 or 90	7.0	5.0	3.0	1.5	0.8	0.5
20 or 80	10.0	6.8	3.8	1.8	1.0	0.5
50	11.0	7.8	4.0	2.0	1.3	0.8

which the estimated standard error must be multiplied to obtain other odds deemed more appropriate can be found in most statistical textbooks.

Table B shows rough standard errors of estimated numbers up to 50,000. The relative sampling errors of larger estimated numbers are somewhat smaller than for 50,000. For estimated numbers above 50,000, however, the nonsampling errors, e.g., response errors and processing errors, may have an increasingly important effect on the total error. Table C shows rough standard errors of data in the form of percentages. Linear interpolation in tables B and C will provide approximate results that are satisfactory for most purposes.

For a discussion of the sampling variability of medians and means and of the method for obtaining standard errors of differences between two estimates see 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary.

Illustration: Table 9 shows that there are 13,82 employed females 14 years old and over who worked 4 hours during the reference week in the crude petroleu and gas industry. Table B shows that a rough approxi mation to the standard error for an estimate of 13,82 is 459, which means that the chances are about 2 ou of 3 that the results of a complete census would no differ by more than 459 from a sample estimate. I also follows that there is only about 1 chance in 10 that a complete census result would differ by as muc as 1,148, that is, by about 2½ times the number esti mated from table B.

(Based on 5-percent sample)

[1] CONTAINS A SMALL NUMBER OF UNEMPLOYED PERSONS WHO LAST WORKED BEFORE 1950 FOR WHOM CLASS OF WORKER WAS NOT ASKED. THE PORTION IN AGRICULTURE IS TOO SMALL TO ESTIMATE. FOR NONAGRICULTURAL INDUSTRIES THIS AMOUNT IS ESTIMATED AT 40,000, EVENLY DIVIDED BETWEEN MALES AND FEMALES.

Table 27.--CLASS OF WORKER AND COLOR OF THE EXPERIENCED CIVILIAN LABOR FORCE, BY AGRICULTURE AND NONAGRICULTURAL INDUSTRIES, EARNINGS IN 1959, AND SEX, FOR THE UNITED STATES: 1960

(Based on 5-percent sample. Median not shown where base is less than 1,000)

EARNINGS, COLOR, AND SEX	TOTAL, EXPERIENCED CIVILIAN LABOR FORCE	AGRICULTURE					NONAGRICULTURAL INDUSTRIES				
		TOTAL	PRIVATE WAGE AND SALARY WORKERS	GOVERNMENT WORKERS	SELF-EMPLOYED WORKERS	UNPAID FAMILY WORKERS[1]	TOTAL	PRIVATE WAGE AND SALARY WORKERS	GOVERNMENT WORKERS	SELF-EMPLOYED WORKERS	UNPAID FAMILY WORKERS[1]

[1] CONTAINS A SMALL NUMBER OF UNEMPLOYED PERSONS WHO LAST WORKED BEFORE 1959 FOR WHOM CLASS OF WORKER WAS NOT ASKED. THE PORTION IN AGRICULTURE IS SO SMALL TO ESTIMATE. FOR NONAGRICULTURAL INDUSTRIES THIS AMOUNT IS ESTIMATED AT 40,000, EVENLY DIVIDED BETWEEN MALES AND FEMALES.

Table 27.--CLASS OF WORKER AND COLOR OF THE EXPERIENCED CIVILIAN LABOR FORCE, BY AGRICULTURE AND NONAGRICULTURAL INDUSTRIES, EARNINGS IN 1959, AND SEX, FOR THE UNITED STATES: 1960--Con.

(Based on 5-percent sample. Median not shown where base is less than 1,000)

[1] CONTAINS A SMALL NUMBER OF UNEMPLOYED PERSONS WHO LAST WORKED BEFORE 1950 FOR WHOM CLASS OF WORKER WAS NOT ASKED. THE PORTION IN AGRICULTURE IS TOO SMALL TO ESTIMATE. FOR NONAGRICULTURAL INDUSTRIES THIS AMOUNT IS ESTIMATED AT 40,000, EVENLY DIVIDED BETWEEN MALES AND FEMALES.

Industrial Characteristics of the Negro Population

Table 1.--DETAILED INDUSTRY OF NEGROES IN THE EXPERIENCED CIVILIAN LABOR FORCE, BY SEX, FOR THE UNITED STATES, URBAN AND RURAL: 1960
